

INSTALLING A POWER HUB

1 Cover the Side

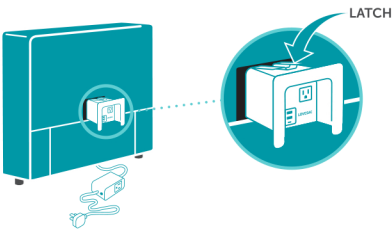

Cover the Side as you would normally. To learn how to cover a Side, visit lovesac.com/instructions.

2 Thread Cord Through Side

On a single Side run the plug, cord, and convenience outlet through the Clamp hole and out the bottom of the Side. *Note: The Power Hub and convenience outlet is to be installed only on a single portable Sectionals piece.

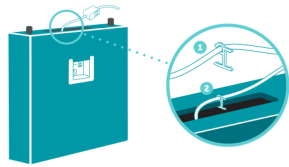

3 Insert Power Hub into Clamp Hole

Once inserted, use one or two fingers to push up on the latch to secure.

Insert the Power Hub all the way into the Clamp hole until the Power Hub's edges lie flat against the upholstery. You'll know it's securely in place when the latch clicks.

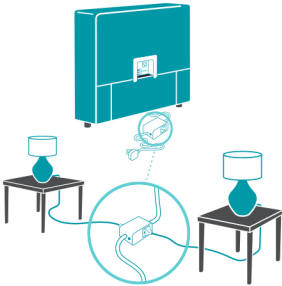

4 Clip the Cord in Place

Use clips to route cord away from shoe & feet connections to prevent cord pinching.

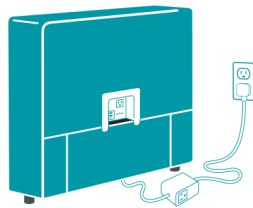

Place the power cord in the hook end of the Clip and slide the bracket into the underside of the Seat or Side frame. Place Convenience Outlet on the floor. *Note: Depending on the Sectionals piece, one bracket might fit the frame better than the other.

5 Add Accessories to Convenience Outlet

Two 120V outlets are conveniently placed to help limit the amount of cords running to your wall.

6 Plug Power Hub into the Wall

Plug the power cord into a wall outlet and you're ready to experience an upgraded level of comfort.
