

UNPACKING & FLUFFING YOUR SAC

Shrunken
Durafoam-filled Sac

- 1 Remove the Sac Insert from the duffel.

Fluffing your Sac is a bonding experience. The Durafoam inside takes several days to reach its full potential. Be patient.

- 2 Break up Durafoam **from outside** by hand.

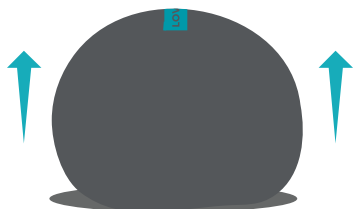

Opening the zipper on the Sac Insert is not necessary.

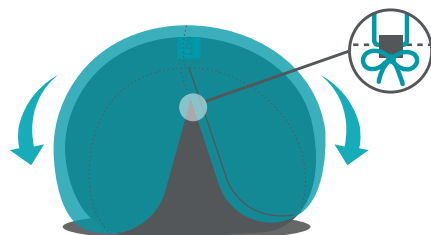

- 3 Grab the bottom and flip over and over.
(This introduces air into the Durafoam, allowing it to fluff up.)

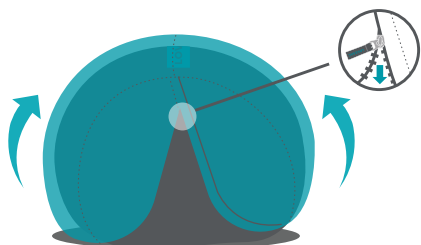

Rotate, fluff, and repeat each time your Sac is used. The more you fluff your Sac, the fluffier it becomes!

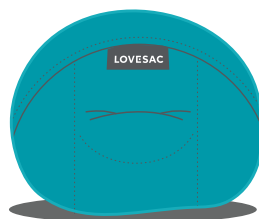

- 4 Once fully fluffed, position your Sac Insert with the **logo flap face up**.

- 5 Put your unzipped Cover over the Sac so the **bottom seam** of the Cover lines up with the **top seam** of the Sac Insert. Covers have "Laces" that tie to "Loops" on the Sac insert.

- 6 Pull the two sides of the Cover together as you zip downwards, rotating the Sac as you zip.

- 7 Finish fluffing, punch yourself a nice seat and experience **Total Comfort!**
