

THE INDUSTRY-LEADING LOCKING SYSTEM

Uniclic® is a glueless locking system that leads the flooring industry with its fast and effortless installation process. Its innovative design maintains pre-tension between planks, ensuring a tight joint and preventing unwanted gaps. Uniclic eliminates the need for adhesive, streamlining the installation process and making it quick and hassle-free.

UNICLIC LOCKING SYSTEM

COMPETITIVE LOCKING SYSTEM

1. Room To Expand: Extra space for expansion prevents squeaking and peaking for a quieter, more stable floor.

2. Unified and Protected: Pre-tension creates a tight, stable joint that keeps water on the surface and safeguards the subfloor.

3. Durable by Design: Triple-layer profile ensures structural integrity after installation, delivering optimal performance and preserving a flawless look over time.

4. Eliminate Height Differences: A fully supporting tongue ensures precise vertical locking, eliminating height differences and guaranteeing a flawless, stable surface.

1. Height Variations: Limited vertical locking can lead to height variations and joint failure over time.

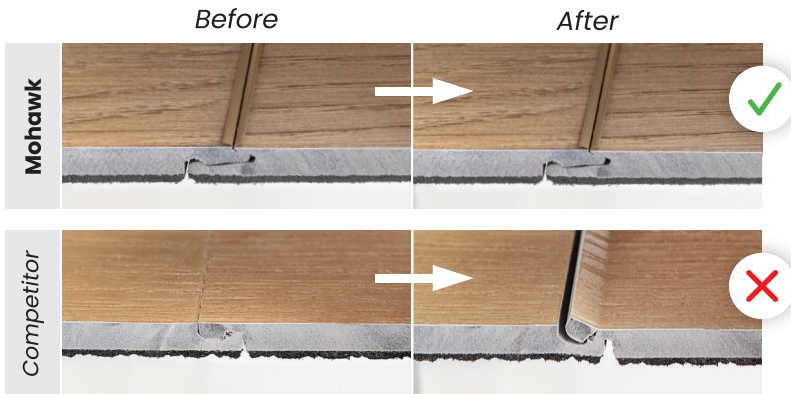

2. Limited Joint Stability: A gravity-only connection offers less resistance to movement, which can result in joint separation.

3. Prone to Failure: Two-layer rigidity can bend under pressure, causing joint breakage and visible surface damage.

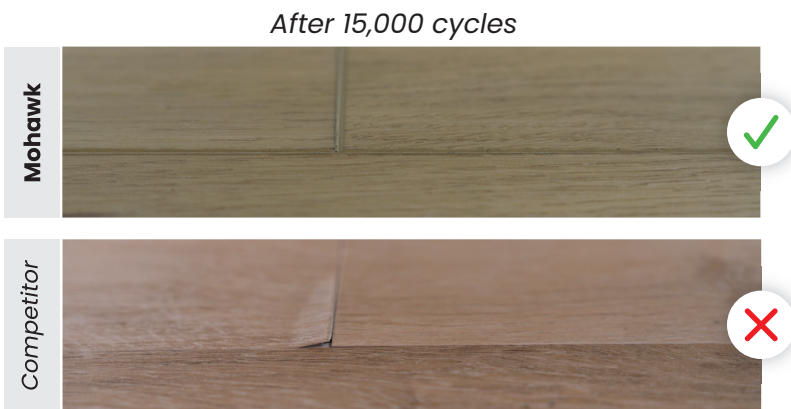

4. No Pre-Tension Protection: A gravity-only joint offers less hold between planks, allowing moisture to pass through more easily.

5. Tight Fit, More Noise: A snugger joint creates squeaking as the floor responds to temperature changes.

The #1 warranty claim worldwide for vinyl flooring is locking system failure. **Our joints aced the tests.**

*Testing utilized profile tensile ISO 24334 on vinyl SPC core construction.

**Testing utilized castor chair EN ISO 4918 on vinyl SPC core construction.

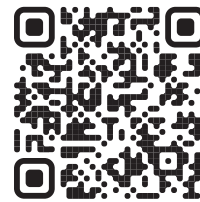

TENSILE STRENGTH TEST

This test simulates real-world stresses, like foot traffic or moving furniture. **Our Uniclic® joints withstood over 1.5x more force,*** revealing the locking system's superior strength and reliability.

CASTOR CHAIR TEST

This test simulates repeated castor chair movement over installed flooring to measure joint durability under real-world wear conditions. **Our Uniclic® joints lasted 2x longer.****
